

BELAIR

ENVIRONMENTAL STATEMENT

Respect for our environment has been a long held value at Belair.

Our commitment to high quality components and raw materials results in long lasting product that maintains its looks and functionality throughout it's lifetime.

Over our history, we have consistently worked to reduce the amount of scrap and waste from our processes. Wherever possible, damaged or blemished product has been cut down into usable components. In addition, we have been able to offer our distribution system a limited line of factory second product which will have only minor imperfections that do not interfere with the functionality of the product.

Our plant and offices actively recycle paper, glass, plastic, aluminum and other metals. Additionally we continue to seek ways to reduce the amount of paper consumed within our organization, moving to electronic format where possible.

We work to minimize the packaging materials that are used for individual orders, and all materials used in our packaging process are fully recyclable.

Our lumber suppliers are also committed to sustainability and minimizing their impact upon the environment, meeting and exceeding government standards. The thermally fused laminate board we purchase consists of 100% recycled product.
